PRINCIPALI ATTIVITA'

Si occupa dello studio dei processi biogeochimici, della caratterizzazione e dell'accumulo di contaminanti organici e inorganici, in particolare gli idrocarburi e i metalli, presenti in varie matrici ambientali (sedimenti marini, colonna d'acqua, organismi marini). La sua ricerca è principalmente svolta nel Mar Adriatico, sia in ambienti marini costieri che di mare aperto. Svolge attività di laboratorio per l'estrazione e l'analisi chimica in UHPLC-FLD-DAD di idrocarburi. Partecipa a crociere oceanografiche di progetti nazionali e internazionali, per il campionamento e la gestione dei sedimenti marini e degli organismi marini, e per il prelievo dei parametri chimico-fisici della colonna d'acqua. Tutor aziendale di studenti universitari (circa 4 all'anno) e co-relatore di studenti universitari (circa 1 all'anno). Ha preso parte a gruppi di lavoro per la "Divulgazione Scientifica" delle attività del CNR-IRBIM Ancona e allo staff tecnico scientifico degli eventi "Tipicità in Blu" ed "Ocean Hackaton".
